Extended Description

The project site is located on Lois Tackett Drive off Hwy 979/1426. The site is being negatively impacted by surface drainage runoff. The water enters the Tackett property at the south end from a pipe on adjacent property. The runoff periodically floods the Tackett property. To correct the problem a flat bottom gabion ditch (4 feet wide) will be constructed along a hillside on the east side of the property. Some excavation of the hill may be required for the construction of the ditch. The gabion ditch will flow into a new concrete ditch which will flow to an existing dropbox next to Hwy 979/1426.

Any excavated material will be disposed on the north side of the property on the designated waste area.  
A rock core subdrain will be constructed under the waste area.

Site Preparation includes clearing and grubbing of vegetation. The construction areas shall be revegetated using agricultural limestone, fertilizer, seed, and mulch. Hay bales and silt fences shall be installed for silt and erosion control. A hoe ram bid item is included for excavation work needed for the ditches, subdrains and retaining walls.

A landscape allowance is included to replace 100% of landscape disturbed as needed as part of normal construction efforts A utility relocation/structural removal bid item is included to move any utilities that will be required.
