RFP 19-05 HUNTERS BRANCH PHASE II STREAM RESTORATION

SECTION 1. PURPOSE

The purpose of this RFP is to solicit proposals for the subject project. The purpose of the project is to assess approximately 1,800 linear feet of the Hunters Branch, Accotink Creek watershed, and recommend stream restoration of degraded channels, enhancements to wetlands, improvements to storm drain outfalls. The project assessment limits include all of the stream channels, storm drain outfalls and drainage ways as specified, located from Tapawingo Road SW to the Town Boundary. Please see attached map showing the project limits.

The Consultant must assess stability within the project limits, develop a concept, conduct public meetings, complete project designs, complete cost estimates, obtain permit approvals, and administer construction phase services.

SECTION 2. BACKGROUND

The Town of Vienna is located approximately 15 miles west of Washington D.C., and is called home by approximately 16,000 residents. With a geographic area of slightly over 4 square miles, the Town is one of a handful of incorporated areas within Fairfax County. The Town was primarily developed during the 1950's and 60's without the environmental benefits of Stormwater Management and Water Quality Treatment. Further subdivision development in the 1980's throughout the Town of Vienna increased impervious areas, enclosed tributaries, straightened streams, removed riparian buffers and steepened stream banks to allow more homes to be built. Recently, the Town has experienced a re-development boom leading to a further increase in impervious surfaces and a further burden on the receiving water courses. Predictably, the receiving streams and channels have experienced incision, erosion and widening in response to the increase in water quantity as a result of 50 plus years of development. Within Vienna's four plus square miles is the watershed for the Hunters Branch section of the Accotink Creek watershed.

2. Geomorphic Assessment

The Engineer may use the Rosgen Stream Classification System (levels I-III), or similar, for assessing the Stream Channel. The length of stream to be assessed is approximately 1,800 linear feet. The preliminary assessment data will provide information on the current stream conditions and is to be electronically sent to DPW when completed. All methods, data collection, and analysis must be followed as directed in the United States Department of Agriculture, Natural Resources Conservation Service, Part 654 Stream Restoration Design National Engineering Handbook, unless otherwise directed or agreed to by the Town.
